The Certified Energy Manager (CEM[®]) certification is the most recognized designation in energy management providing a wide range of benefits to help you thrive in your occupation.

This five-day seminar covers the technical, economic and regulatory aspects of energy management as well as the latest energy cost reduction techniques and strategies.

The program offers a discussion and problem-solving forum, preparation tailored for the CEM exam, and includes a 4-hour exam session.

The following topics will be covered:

- Codes, standards and indoor air quality
- Energy procurement
- Energy savings calculation
- Building automation and control systems
- Energy audits and instrumentation
- Green buildings, LEED[™] and ENERGY STAR[®] certifications
- Electrical systems
- Thermal energy storage systems
- HVAC systems
- Lighting systems
- Motors and drives
- Boilers and steam systems
- Industrial systems
- Maintenance and commissioning
- Building envelope
- Financing solutions
- CHP systems

**All training courses can be delivered on site.*
